The Clicc-World: Products, applications, power rating and prices

The Clicc-system is a solar kit as well as an innovative gadgetry platform. Combining the basis devices Clicc and ClicLite is already enough to charge rechargeable batteries of terminal equipment or to run devices directly.

The Clicc

A highly efficient 4x4 cm small solar module, 4 mm flat and 10 g light. The Clicc has a nearly indefinite life expectancy, consists of highly capable crystalline solar panels and is available in six colours at the moment (seasonal and limited designs will follow). By connecting the modules to all four directions power can be increased as necessary. It is possible to create countless forms and designs and to develop convenient basis devices within the gadgetry platform for all imaginable applications.

Application

As mobile energy reserve for mobile phones, iPods or other devices the module is plugged on the basis device ClicLite and generates power from solar energy in this combination.

Power rating

One module produces 0.17 watt with ideal solar radiation. Six modules produce 1 watt. Expressed in real charge current that means: 1 Clicc = 35mA, 6 Cliccs = 210mA.

Price

The Clicc is available as three-pack and in two different colour schemes for 19.50 € each. A single Clicc costs 7 €.

The ClicLite

Basis device, energy reserve and the world's smallest and with 30g lightest solar charger. With USB interface for mobile phone, iPod, camera etc.. With integrated ultra bright LED-light in three light intensities and individually usable ring for hanging up on clothes, bags or keys.

Application

Via the USB-port of the ClicLite energy will be transferred to a smart phone e.g.. The ClicLite also suits as a charger for cameras, iPods, route guidance systems and further electronically operated devices. The ClicLite also can be charged via the USB-interface of a computer within two hours.

Power rating

- The rechargeable battery of the ClicLite has a capacity of 450 mAh and delivers at its 5V USB-outlet an electric current of 500mA.

- The ClicLite will be fully charged within approximately four hours with a three pack of Cliccs, with a single module within approximately twelve hours.
- Power rating of the LED-light with fully charged rechargeable battery: 12 hours when operating at maximum level, 50 hours at medium light intensity, 600 hours on night light level.
- A fully charged ClicLite charges an ordinary mobile phone for approximately 30%, a smart phone for approximately 15% - which is about an hour of talk time or intensive use.
- One hour of maximum incident solar radiation on a Clicc yields 5 minutes of talk time with smart phone or mobile phone.

Price

ClicLite and Clicc cost 36 € in the bundle.

The ClicBoard

For up to nine Cliccs stuck together the ClicBoard is the stabilising back panel when the modules are in motion, too.

Application

The required size is cut out and the assembled Cliccs are attached with the accompanied pads.

By expanding the shoring the field is tilted directly at the sun or hung with the integrated eyes in the window or on the bag.

Preis

7 € per edition .

The ClicSet

Everything in it, because the box contains all materials in order to effectively use the ClicLite: clothing clip, USB-USB charging cable and USB adapter cable - for the latest smart phones and mobile phones.

Price

Compete box 14 €.

The colours

Depending on your mood and possibly also daily condition the Clicc is available in the colours Sun (yellow), Sky (blue), Emotion (red), Grass (Green), Cloud (white) and Night (Black).

The ClicLite is white.
